

Install a VMware Virtual Machine

(You can search online for the installation steps.)

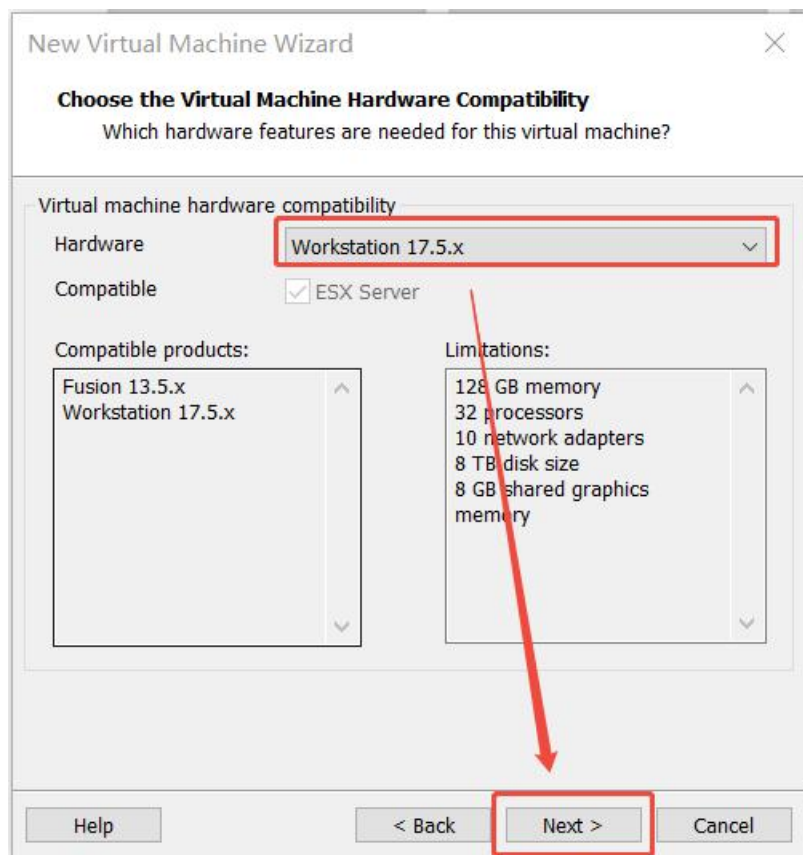

Run the virtual machine as an administrator and create a new virtual machine.

New Virtual Machine Wizard

Guest Operating System Installation

A virtual machine is like a physical computer; it needs an operating system. How will you install the guest operating system?

Install from:

☐ Installer disc:

No drives available

☐ Installer disc image file (iso):

D:\ubuntu-20.04.6-desktop-amd64.iso

Browse...

☒ I will install the operating system later.

The virtual machine will be created with a blank hard disk.

New Virtual Machine Wizard

Select a Guest Operating System

Which operating system will be installed on this virtual machine?

Guest operating system

☐ Microsoft Windows

☒ Linux

☐ VMware ESX

☐ Other

Version

Ubuntu 64-bit

New Virtual Machine Wizard

Name the Virtual Machine
What name would you like to use for this virtual machine?

Virtual machine name:

Location:

The default location can be changed at Edit > Preferences.

For this step, you can select a higher specification if your computer has good hardware configuration. I set it to 2*2.

New Virtual Machine Wizard

Processor Configuration
Specify the number of processors for this virtual machine.

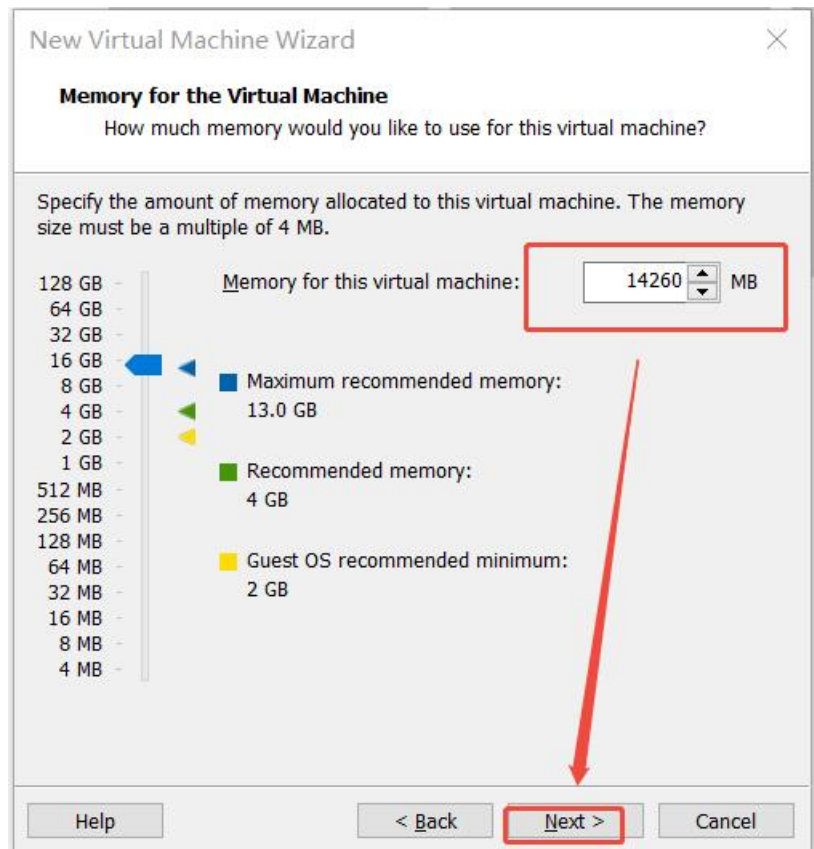

Processors

Number of processors:

Number of cores per processor:

Total processor cores: 4

Similarly, for this step, you can allocate more RAM if your computer has high configuration. Here I choose about 16GB.

×

Network Type
What type of network do you want to add?

Network connection

☐ Use bridged networking
Give the guest operating system direct access to an external Ethernet network. The guest must have its own IP address on the external network.

☒ Use network address translation (NAT)
Give the guest operating system access to the host computer's dial-up or external Ethernet network connection using the host's IP address.

☐ Use host-only networking
Connect the guest operating system to a private virtual network on the host computer.

☐ Do not use a network connection

Select I/O Controller Types
Which SCSI controller type would you like to use for SCSI virtual disks?

I/O controller types

SCSI Controller:

☐ BusLogic (Not available for 64-bit guests)

☒ LSI Logic (Recommended)

☐ LSI Logic SAS

☐ Paravirtualized SCSI

Select a Disk Type
What kind of disk do you want to create?

Virtual disk type

☐ IDE

☒ SCSI (Recommended)

☐ SATA

☐ NVMe

Help < Back Next > Cancel

New Virtual Machine Wizard ✕

Select a Disk
Which disk do you want to use?

Disk

☒ Create a new virtual disk
A virtual disk is composed of one or more files on the host file system, which will appear as a single hard disk to the guest operating system. Virtual disks can easily be copied or moved on the same host or between hosts.

☐ Use an existing virtual disk
Choose this option to reuse a previously configured disk.

☐ Use a physical disk (for advanced users)
Choose this option to give the virtual machine direct access to a local hard disk. Requires administrator privileges.

Specify Disk Capacity
How large do you want this disk to be?

Maximum disk size (GB):

120.0

Recommended size for Ubuntu 64-bit: 20 GB

☐ Allocate all disk space now.

Allocating the full capacity can enhance performance but requires all of the physical disk space to be available right now. If you do not allocate all the space now, the virtual disk starts small and grows as you add data to it.

☒ Store virtual disk as a single file
☐ Split virtual disk into multiple files

Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.

Ready to Create Virtual Machine

Click Finish to create the virtual machine. Then you can install Ubuntu 64-bit.

The virtual machine will be created with the following settings:

Name:	Ubuntu 64-bit
Location:	D:\Documents\Virtual Machines\Ubuntu 64-bit
Version:	Workstation 17.5.x
Operating System:	Ubuntu 64-bit
Hard Disk:	120 GB
Memory:	18820 MB
Network Adapter:	NAT
Other Devices:	4 CPU cores, CD/DVD, USB Controller, Sound Card

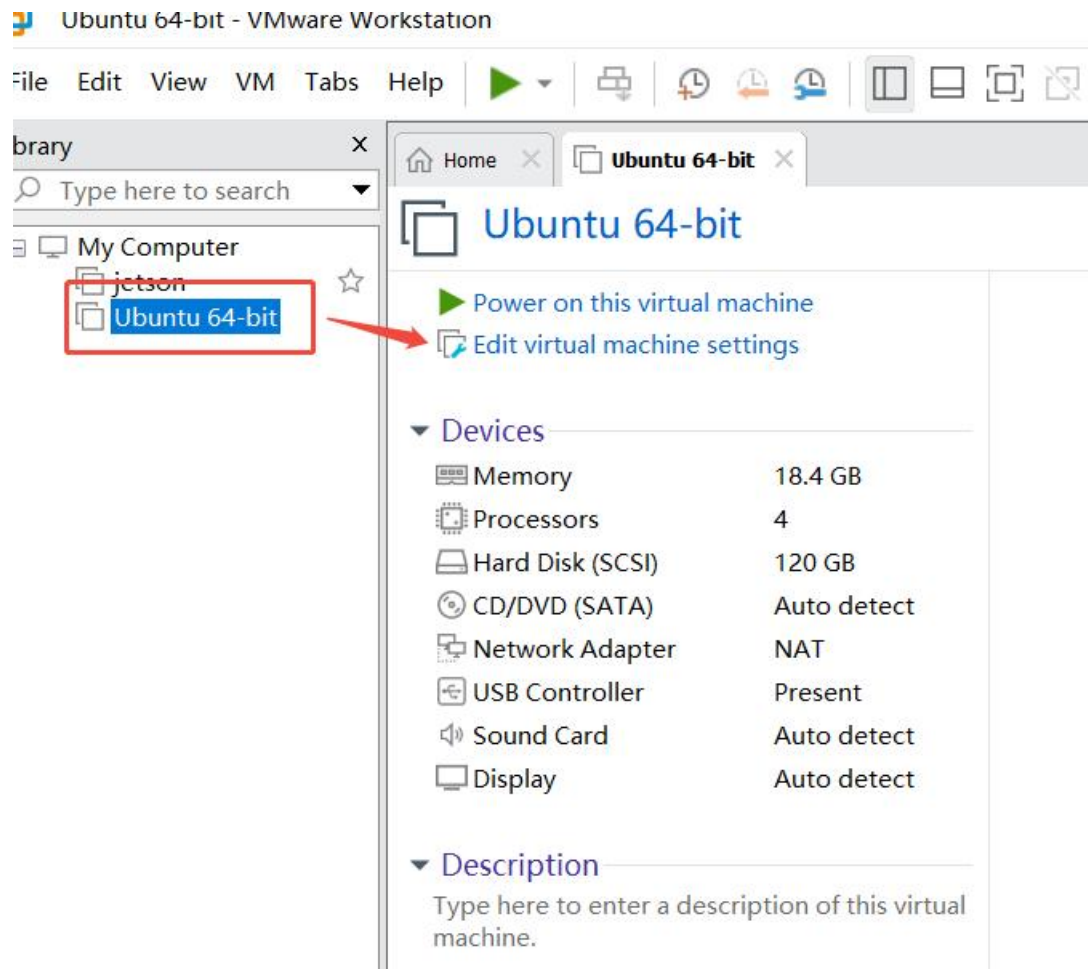

[Customize Hardware...](#)

Finish

Cancel

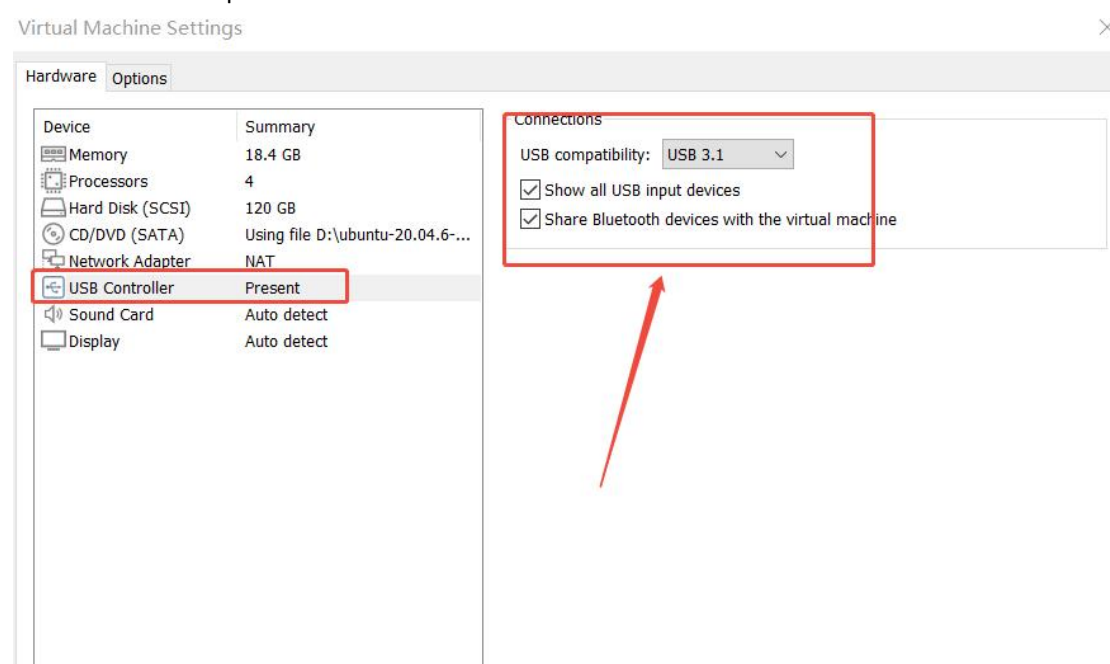

Select the virtual machine we just created and click Edit

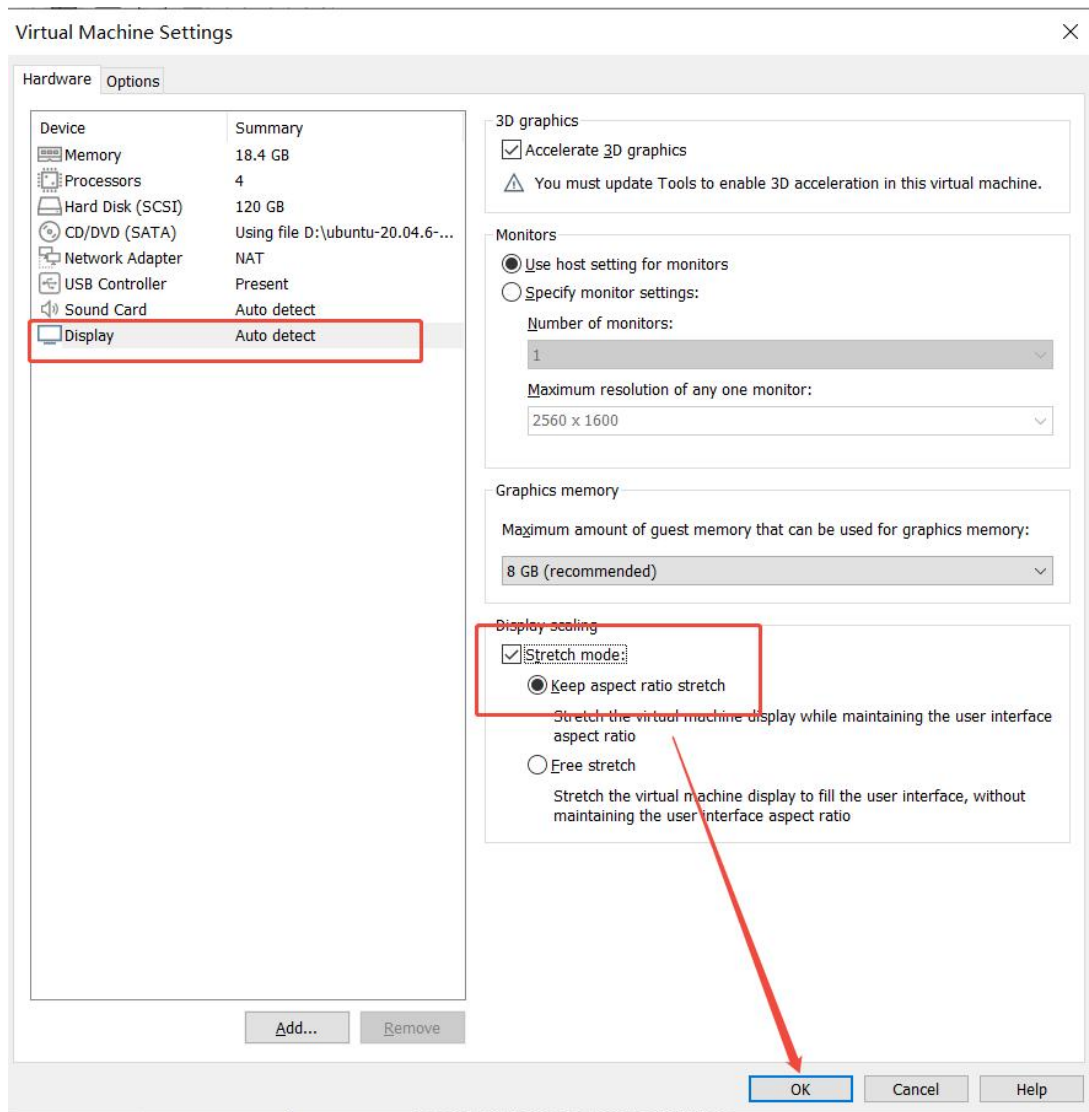

Select the downloaded ISO image file.

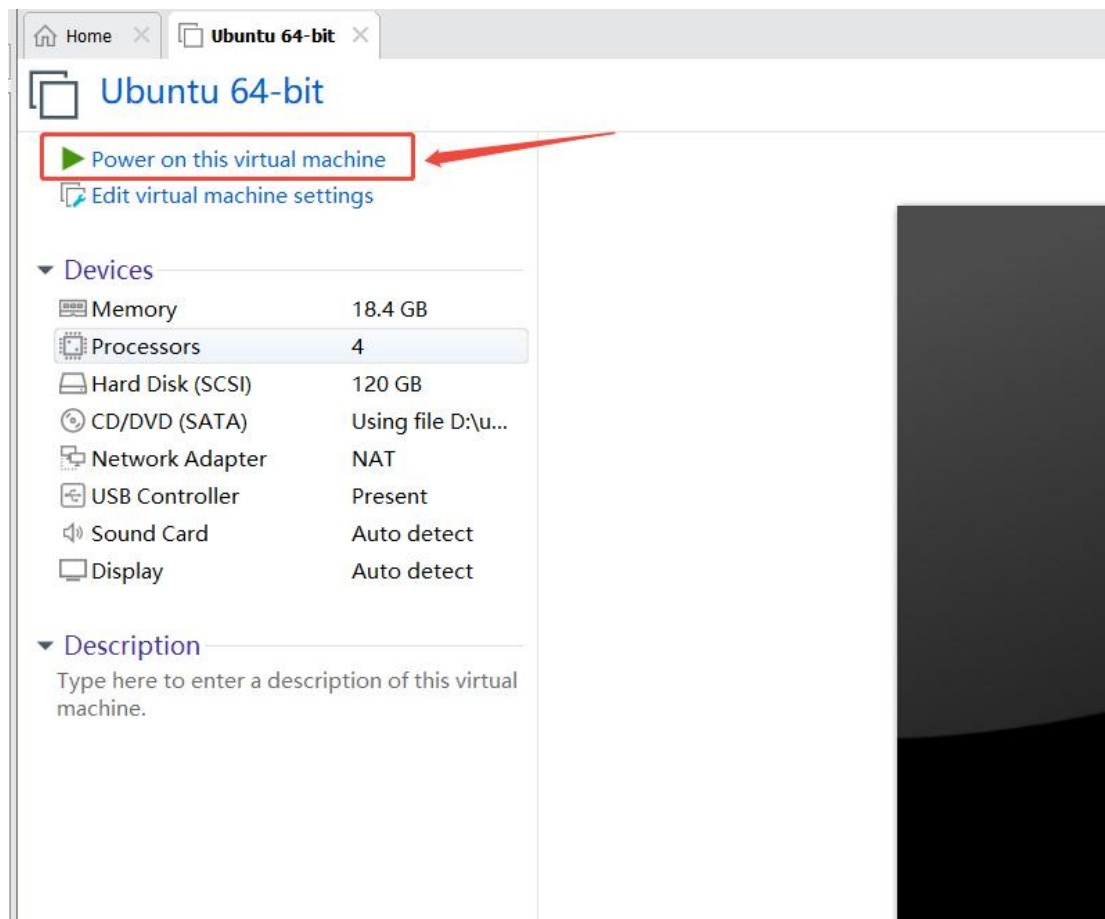

Select the USB 3.1 port

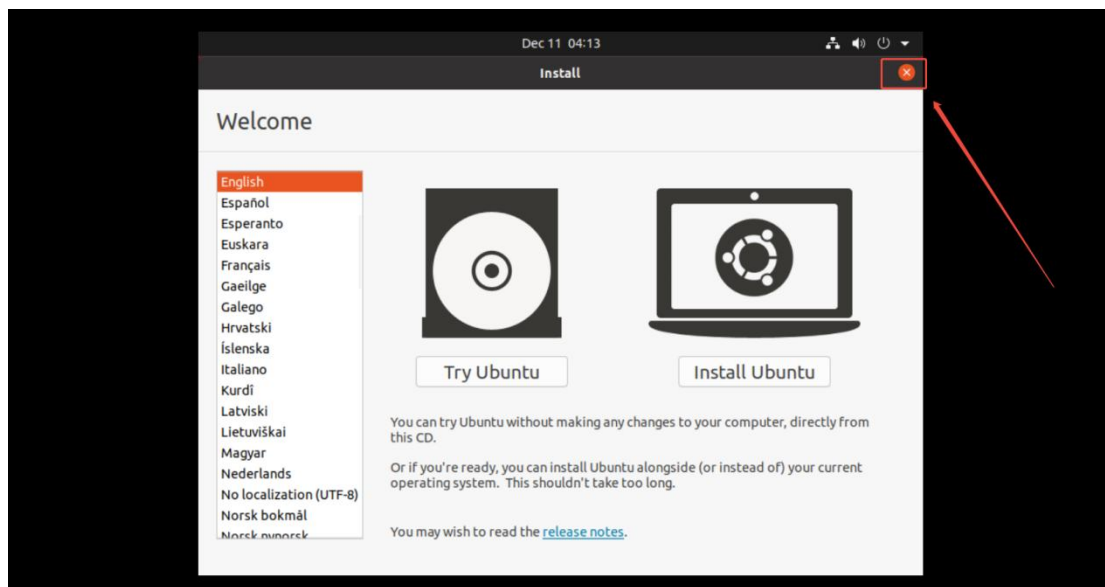

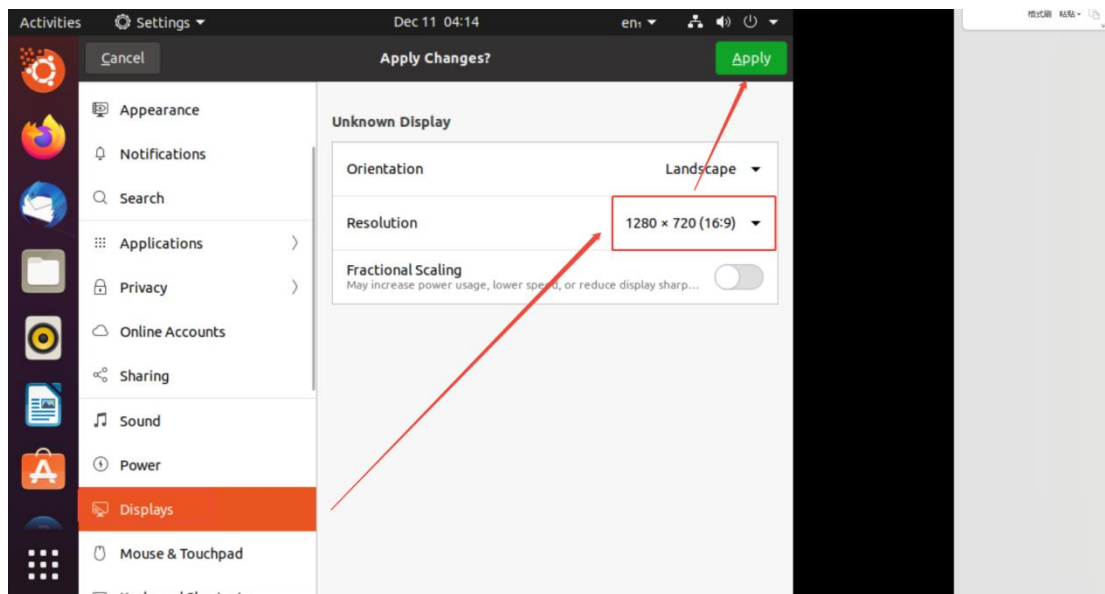

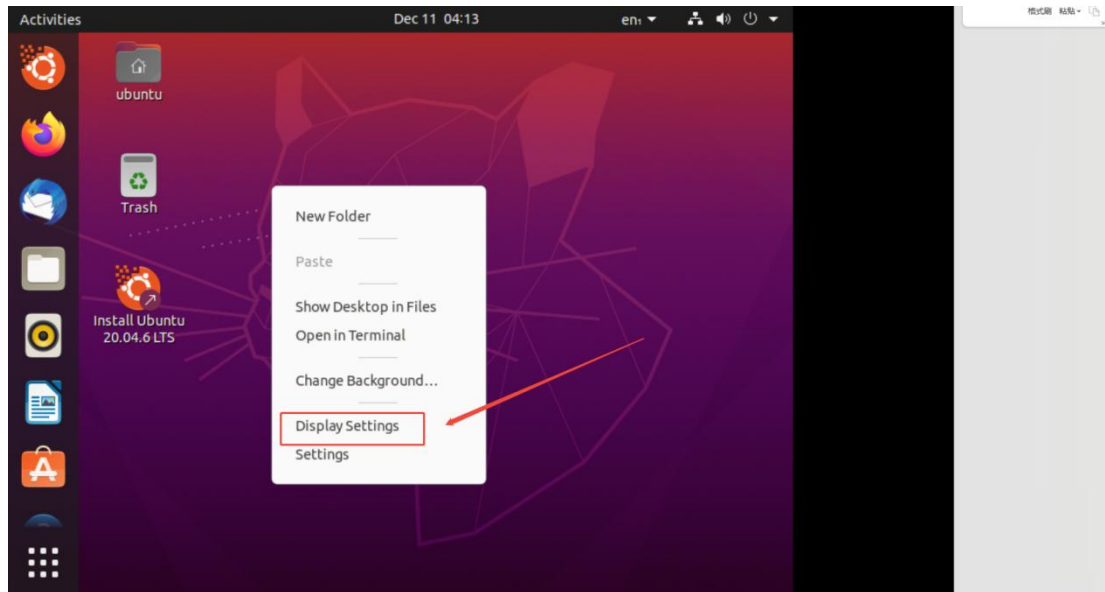

Power on the virtual machine

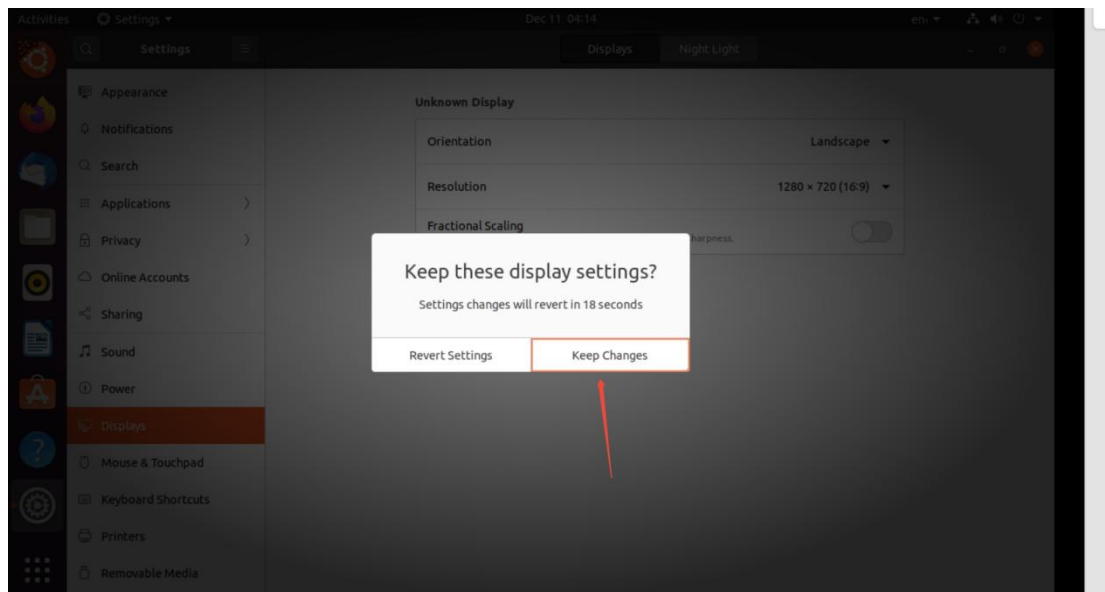

Skip the installation for now. Due to the resolution issue, the installation button is not clickable. We will install the system after adjusting the resolution once we enter it.

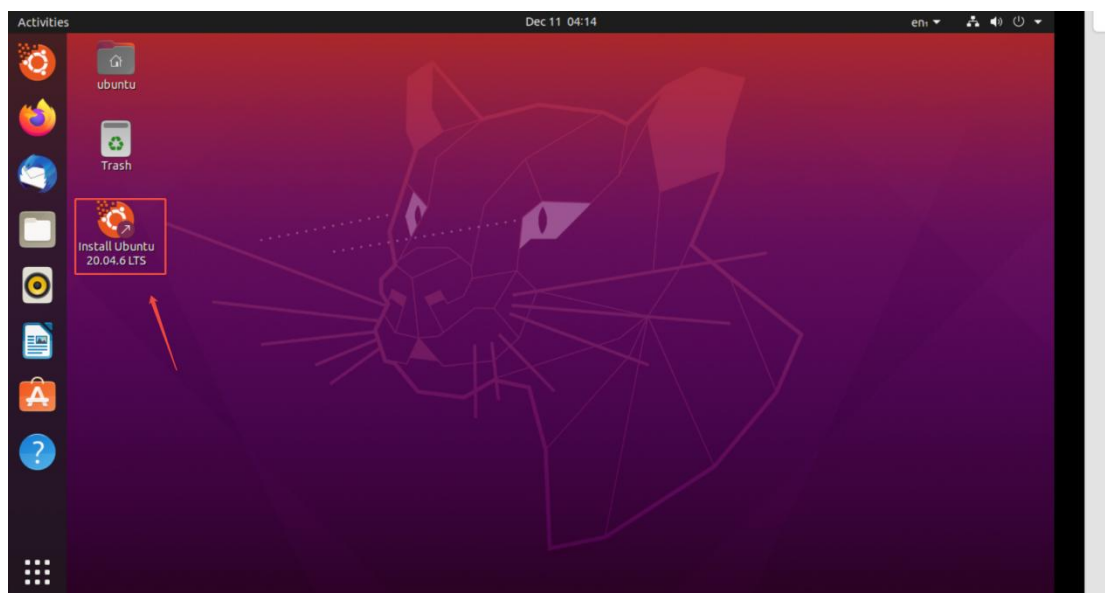

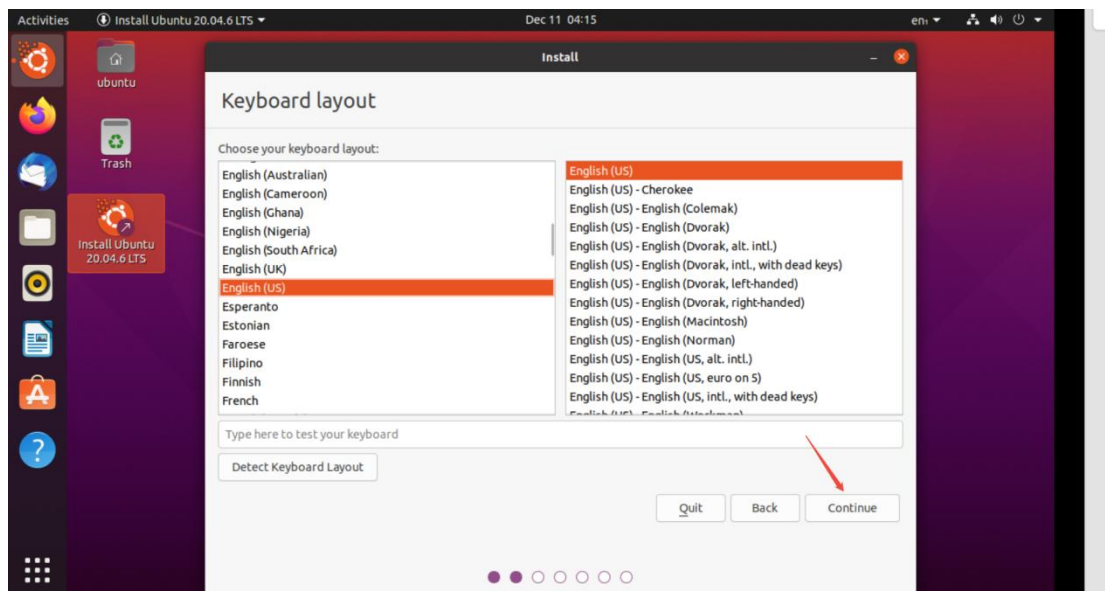

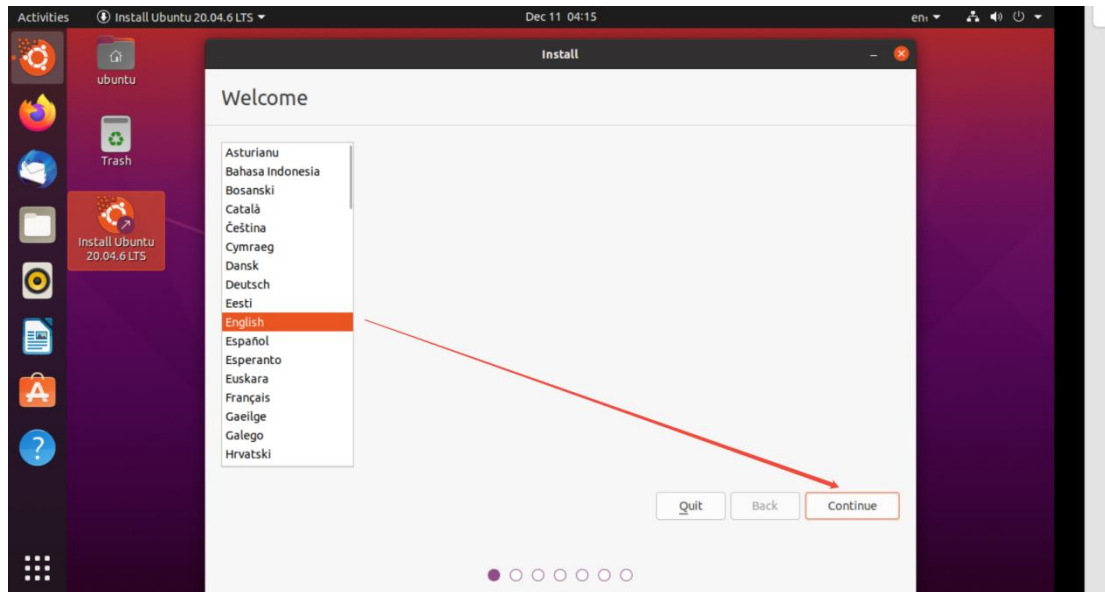

After entering the system, right-click to adjust the resolution.

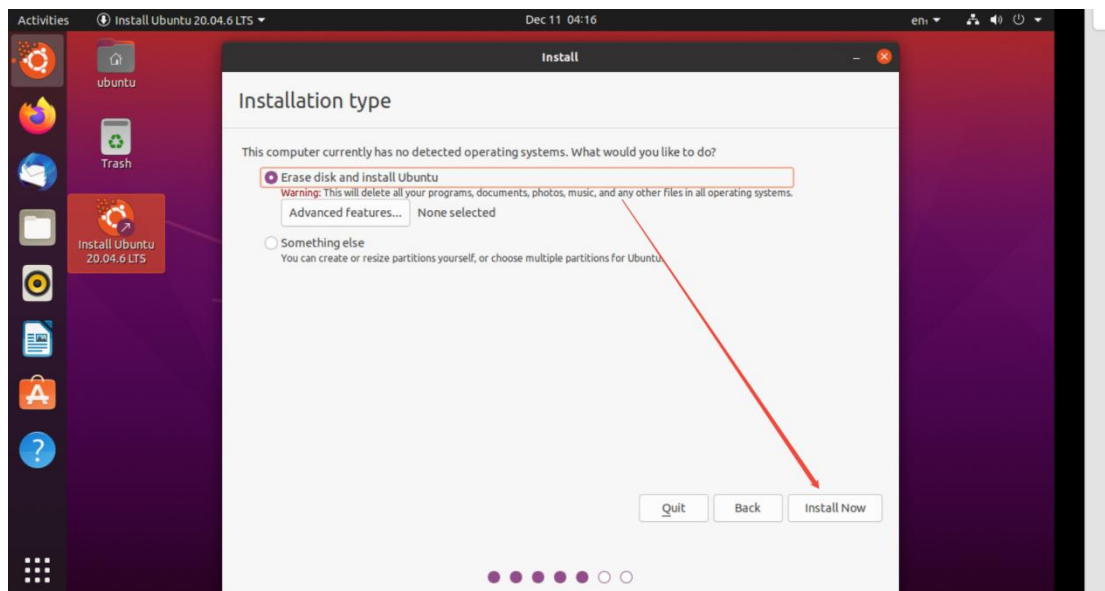

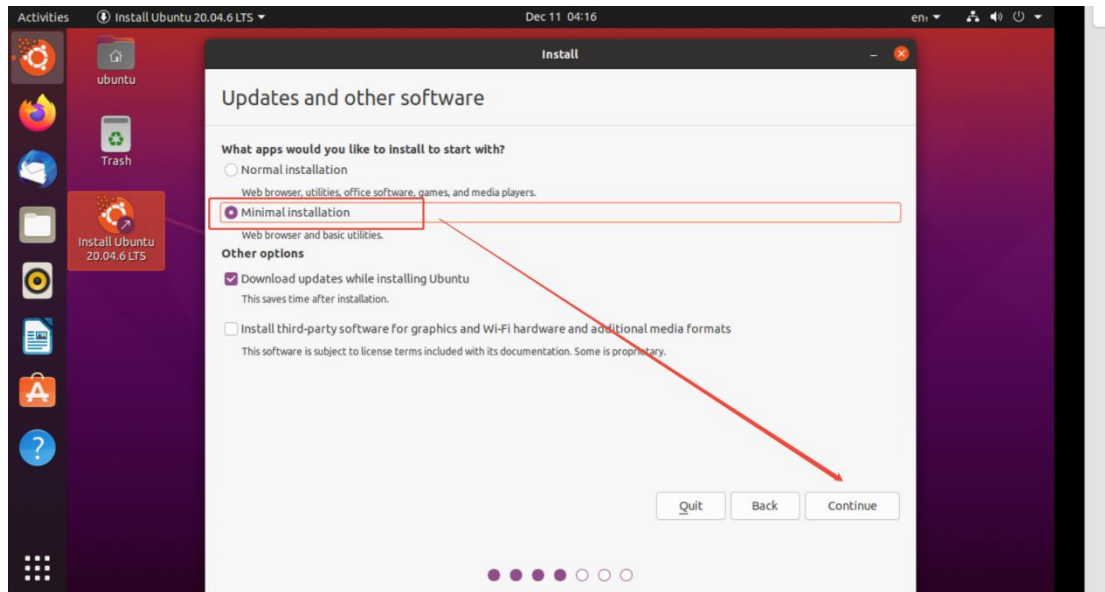

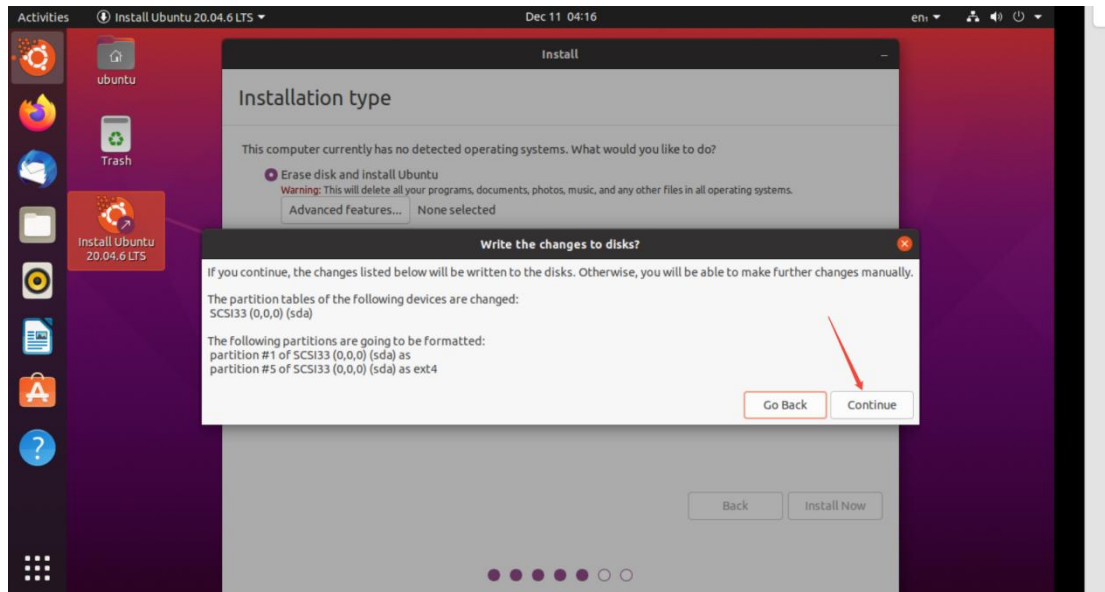

Double-click the installation program on the desktop to install the Ubuntu system.

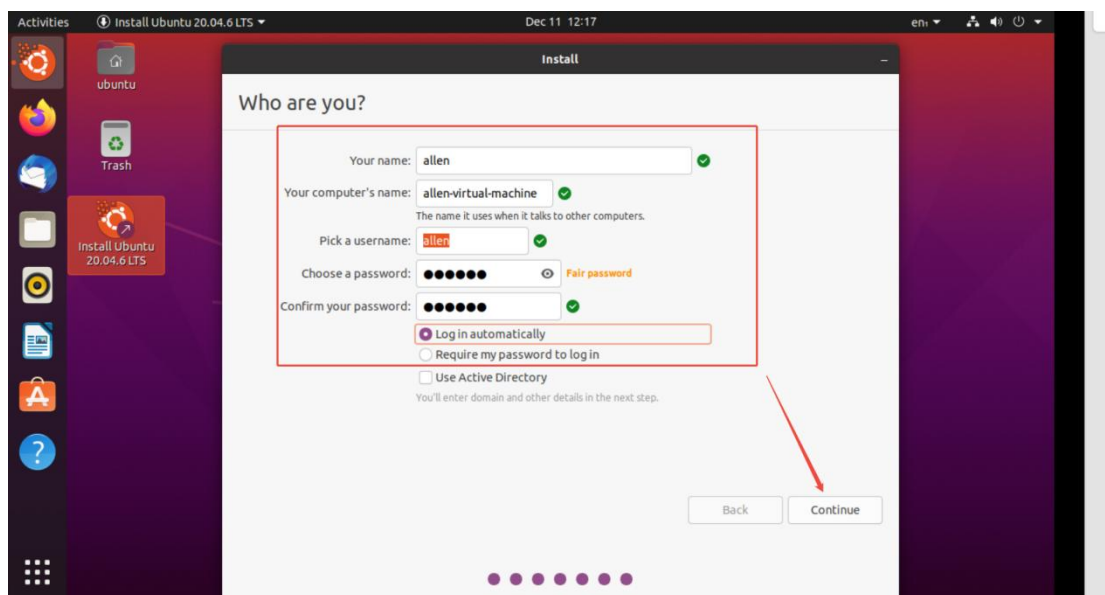

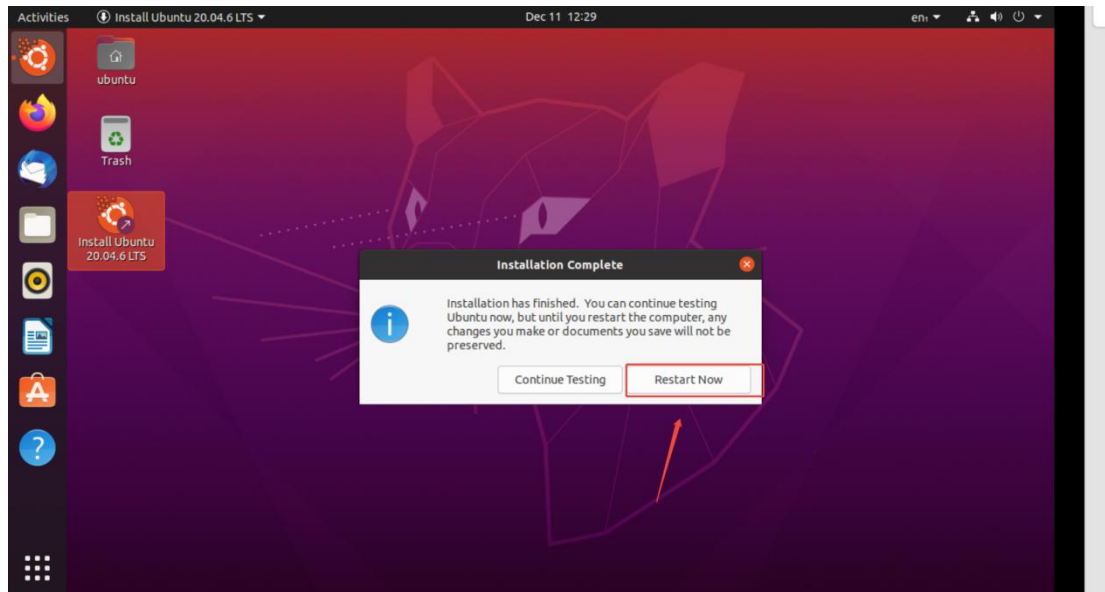

Set up your personal information and login password.

Remember to press **Enter** when the system restarts; otherwise, it will stay in the waiting state indefinitely.
